Exterior Shutters

1. The individual shutters should be the same width as one and one-half (1 ½) the window opening. i.e. if it is a two foot wide window, then two (2) 12 inch wide shutters, 32 inch wide window, then two (2) 16 inch wide shutters, etc.

2. The blades of the shutter should be angled back toward the wall in the open position, if they are louvered. NOTE: In the closed position they would drain away from the wall.

3. “Shutter Dog” should be located at the bottom of the shutter. Some taller windows sometimes have a second “shutter dog” to help them from “flopping” in the wind. The location should be placed mid-way up the shutter.

4. The shutters should be full height of the window opening from the bottom of the lintel to the top.

5. Hinges should be provided.

6. No Board and Batten Louvers will be allowed.

7. Only heart pine, cypress, teak, Honduran Mahogany or Spanish Cedar wood should be used.

8. Shutters may be fixed.
